

TABLE A

COMPARISON OF AIRLINE AND BUSINESS AVIATION PASSENGER-TRIPS

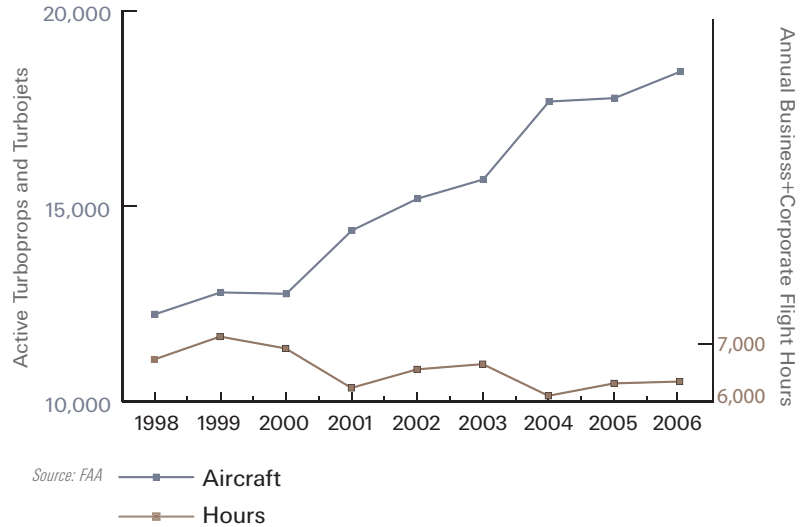

Notes: Premium airline passengers include first-, business- and full-fare economy-class passengers and are based on one-way flights derived from FAA enplanement statistics. A passenger who flies round trip from New York to L.A. via Chicago is logged as making four trips. Numbers of business aviation passengers are estimates based on fleet size, estimated average passenger load (3.5), and other factors.
